Perfect.

Thanks so much!

Jayne

Jayne,

The requirement to update state NPS MPs by Sept. 30, 2014 comes from p. 15 of our 319 grant guidelines, published April 2013 (<http://water.epa.gov/polwaste/nps/cwact.cfm#current>). I have also highlighted the sentence that links this requirement to satisfactory progress determinations.

Because of the importance of a current and relevant NPS management program to guide the use of § 319 resources, these grant guidelines require states to maintain updated NPS management programs. EPA expects 50% of state NPS management programs to be updated by September 2013 in accordance with the guidance provided in appendix A. In addition, EPA expects that the remainder of outdated state NPS management programs will be updated by September 2014. States should devote sufficient resources in their annual § 319 grant work plans to complete these updates. To keep state NPS management programs relevant, states are required to review and update their programs every five years. States that do not maintain current NPS management programs risk a determination of unsatisfactory progress under Clean Water Act § 319(h)(8). (See section IX.I.) Updates need not be comprehensive, unless warranted by significant program changes, but may focus on specific elements that are out-of-date. At a minimum, the update should ensure goals, objectives, and annual milestones are current. These state NPS management program updates must be reviewed and approved by EPA; their final approval resides with the EPA regional water division director.

By the way, you can see the requirement for a CZARA set-aside (5% of a state's total 319 allocation or \$100,000, whichever is less) on p. 42 of these guidelines.

I also just met Christine Psyk, who met in Lynda Hall's office an hour ago to discuss Oregon CZARA with Joelle Gore. That was nice. She seemed surprised that there was a meeting with us and others in 7 minutes. I know Lynda can't make it. She is out of the office for the rest of the day.
